

IN THE CLAIMS:

The following are the claims in the application:

67  
1. (amended) A cleaning attachment for converting a cleaning implement to a mop, comprising a flexible cover having an inner surface and an outer surface, said cover having end sections interconnected by a central section, fastening structure for securing said end sections together whereby said cover may be placed around a cleaning head of the cleaning implement to form an enclosure around the cleaning head with said inner surface of said cover disposed toward the implement and said central section disposed below ~~the bottom of~~ the cleaning head, and reusable mounting structure on said outer surface of said cover at said central section to detachably mount a detached wipe to said outer surface below the cleaning head to convert the cleaning implement to a mop and to detachably remove the wipe after use whereby a different wipe may be selectively mounted to said outer surface of said central section, said reusable mounting structure comprising hook members, in combination with a wipe, and said wipe having loop structure to be engaged by said hook members.

2. (amended) The ~~attachment assembly~~ of claim 1 wherein said reusable mounting structure comprises hook members.

3. (amended) The ~~attachment assembly~~ of, claim 2 ~~in combination with a wipe and wherein~~ said wipe ~~having~~ has loop structure ~~to be engaged by~~ said hook members.

4. (amended) The ~~combination~~ assembly of claim 3 wherein said wipe is made of needle punched material.

5. (amended) The ~~attachment~~ assembly of claim ± 25 in combination with sets of wet and dry wipes.

6. (amended) The ~~attachment~~ assembly of claim ± 25 wherein one of said end sections is provided with a pair of spaced flaps for bending over ~~the~~ a broom head, said fastening structure being on one of said inner surface and said outer surface of said flaps and being on the other of said inner surface and said outer surface of the other end section.

7. (amended) The ~~attachment~~ assembly of claim 6 wherein said central section is flat.

8. (amended) The ~~attachment~~ assembly of claim 7 in combination with a cleaning implement having a cleaning head and a handle, and said ~~attachment~~ cover being wrapped around said head.

9. (amended) The ~~combination~~ assembly of claim 8 wherein said cleaning implement is a plastic bristled broom having its bristles cut at an angle.

10. (amended) The ~~combination~~ assembly of claim 8 wherein said cleaning implement is a sponge mop.

11. (canceled)

12. (amended) The ~~combination~~ assembly of claim 8 wherein portions of said end sections are folded against said central section whereby said central section is of an area larger than the

area at the bottom of said cleaning head.

13. (amended) The ~~combination~~ assembly of claim 8 wherein said ~~attachment~~ cover forms an open sided cover around said cleaning head.

14. (amended) The ~~combination~~ assembly of claim 8 wherein said ~~attachment~~ cover is of bag form and forms a closed enclosure around said cleaning head.

15. (amended) The ~~combination~~ assembly of claim 14 wherein said bag structure is closed by a twist tie around said handle directly above said cleaning head, and said twist tie comprising said fastening structure.

16. (amended) The ~~attachment~~ assembly of claim 1 wherein said cover is of bag form having side walls interconnecting said end sections.

17. (amended) The ~~attachment~~ assembly of claim 16 including a cleaning composition impregnated into said cover.

18. (amended) The ~~attachment~~ assembly of claim 1 wherein each of said end sections includes a fold portion folded against said central section ~~to extend the effective size of said central section.~~

19. (amended) The ~~attachment~~ assembly of claim 1 wherein said cover is impregnated with a cleaning composition.

20. (amended) ~~The attachment of claim 1~~ A cleaning attachment for converting a cleaning implement to a mop, comprising

AM  
Cont'd

a flexible cover having an inner surface and an outer surface, said cover having end sections interconnected by a central section, fastening structure for securing said end sections together whereby said cover may be placed around a cleaning head of the cleaning implement to form an enclosure around the cleaning head with said inner surface of said cover disposed toward the implement and said central section disposed below the cleaning head, reusable mounting structure on said outer surface of said cover at said central section to detachably mount a detached wipe to said outer surface below the cleaning head to convert the cleaning implement to a mop and to detachably remove the wipe after use whereby a different wipe may be selectively mounted to said outer surface of said central section, in combination with a wipe, and said wipe being impregnated with a cleaning composition.

21. (canceled)

22. (canceled)

23. (canceled)

24. (canceled)

AS

25. (new) A cleaning assembly for converting a cleaning implement to a mop, comprising a flexible cover having an inner surface and an outer surface, said cover having end sections interconnected by a central section, fastening structure on said end sections for securing said end sections together said fastening structure being located on said end sections to detachably secure

AS  
Central

said end sections together at spaced locations with an open area therebetween to form an enclosure having a top and a bottom, said fastening structure being at said top of said enclosure and said central section being at said bottom of said enclosure, said top of said enclosure being open with said end sections spaced apart when said fastening structure is disengaged to permit whereby a cleaning head of the cleaning implement to be inserted through said open top of said enclosure to envelop<sup>9</sup> the cleaning head upon securement of said end sections together with said enclosure around the cleaning head with said inner surface of said cover disposed toward the implement and with said central section disposed below the cleaning head and with a handle of the implement extending through said open area, reusable mounting structure on said outer surface of said cover, and a wipe detachably secured to said reusable mounting structure to mount said wipe at said central section for being below the cleaning head to convert the cleaning implement to a mop and to permit removal of the wipe after use whereby a different wipe or the same wipe may be selectively mounted to said reusable mounting means on said outer surface of said cover.

26. (new) The assembly of claim 8 wherein said enclosure has open sides which expose portions of said cleaning head.

27. (new) A cleaning attachment for converting a cleaning implement to a mop, comprising a flexible cover, said cover in its flat unassembled condition having a first end and a second end, a

continuous intermediate section between said first end and said second end, said second end being bifurcated to create a pair of spaced outwardly extending flaps with an open area between said flaps, said cover having an inner surface and an outer surface, said intermediate section including a central section between said first end and said second end, fastening structure on said inner surface of said flaps, complementary fastening structure on said outer surface of said first end, reusable mounting structure on said outer surface of said central section, said fastening structure and said complementary fastening structure be located for engagement when said cover is folded around a cleaning head of a cleaning implement to form a closed loop around the cleaning head with said flaps being outwardly of and secured to said first end whereby said open area between said flaps is adapted to accommodate a handle extending outwardly from the cleaning head, said loop having a top and a bottom, and said central section being at said bottom of said loop remote from said secured first end and flaps at said top of said loop with said reusable mounting structure exposed at said outer surface to detachably mount a detached wipe at said bottom of said loop below the cleaning head to convert the cleaning implement to a mop and to detachably remove the wipe after use whereby a different wipe may be selectively mounted to said outer surface.

28. (new) The attachment of claim 27 wherein said reusable

mounting structure comprises hook members.

29. (new) The attachment of claim 27 wherein each of said end sections includes a fold portion folded against said central section.

30. (new) The attachment of claim 27 wherein said cover is impregnated with a cleaning composition.
